Identifying Market Opportunity

Market Gap Analysis

Bangladesh lacks a trusted and secure marketplace for buying and selling used products. Existing platforms, such as Bikroy.com, Facebook marketplace and groups, suffer from fraud, misrepresentation, and logistical challenges. Buyers struggle with unverified product quality, while sellers face difficulties in reaching serious customers.

With our current economy, more people prefer buying second-hand products to save money and reduce waste. However, no platform currently offers end-to-end solutions, including product verification and delivery services. Additionally, Bangladesh's growing e-commerce market and digital payment adoption indicate a strong demand for a secure and convenient second-hand marketplace.

Consumers increasingly seek trust, transparency, and smooth transactions. A platform that verifies products, secures payments, and integrates delivery services can fill this market gap, creating a reliable and scalable second-hand marketplace in Bangladesh.

In addition, our platform offers **interest on stored funds**, ensuring that their money retains value over time. This encourages sellers to keep their earnings within the system while benefiting from a passive income stream.

Secondary Research

Existing competitors like **Facebook Marketplace** and **Bikroy.com** lack product verification and secure transactions, leading to fraud concerns. A structured platform with trust, verification, incremental benefits and **end to end delivery services** can fill this gap, providing a safe and reliable alternative for buyers and sellers.

The demand for second-hand products is rising **globally**, driven by cost-conscious consumers and sustainability trends. The Bangladeshi eCommerce market contributed to the worldwide growth rate of **9.8%** in 2025. A study by [BASIS](#) found that **over 65% of buyers** are concerned about fraud in online transactions

Primary Research

We conducted a survey with **15+ potential users** by google form, and key insights include

- 75% of respondents are interested in purchasing second-hand furniture and appliances at reasonable prices.
- 87.5% of respondents believe a dedicated platform for buying and selling used items would be beneficial.
- 62.5% are willing to pay for post promotions to make sales easier.
- 18% of respondents frequently change their residence or office, indicating that mobility is not the primary driver for second-hand purchases. Affordability and necessity play a bigger role.
- 62.5% are interested in keeping their earnings on the platform to earn extra incentives.

Here is the survey data:

Go-To-Market (GTM) Strategy

Customer Acquisition Strategy (first 1,000 customers)

- **SEO & Content Marketing:** Targeted blog posts, YouTube videos, and SEO-optimized posts.
- **Social Media Marketing:** Facebook, Instagram, TikTok ads targeting local sellers and buyers.
- **University & Community Campaigns:** Promote our service with student organizations and community groups to encourage listings.
- **Coupons:** Provide free shipping coupons
- **Additional Discount:** Buyer get 5% discount up to 500 taka in premium listing and seller will get 200 taka voucher to purchase any product over 5000 taka
- **Attractive Feature:** Give increment on the stored amount of sellers

Pricing Model: Freemium with Paid Add-ons

We will use a **Freemium model**, where:

- **Basic listings are free** to encourage mass adoption.

- **Premium features** (product verification & promoted listings) require a fee, generating revenue while ensuring trust.

This model **lowers entry barriers** while offering value-added services for serious sellers.

Marketing Channels

Our targeted customers are mainly located in urban areas like Dhaka, Chittagong and mostly internet and social media user. So, social media marketing, google ads, SEO content must be our main marketing channels

- Running ads focusing on affordable second-hand products and secure transactions
- Share our service and features on Facebook groups can be a free marketing source
- Influencer Marketing by tech reviewers, and lifestyle bloggers can increase brand trust and awareness
